THAI JEWELRY DESIGNER GOES GLOBAL

“We use Solidscape to deliver quality masters that will keep our customers coming back each season.”

Charles Berman, Managing Director
Bermark Design

Bermark markets master models of their jewelry designs to manufacturers around the globe. To meet the demands of their customers, they add around 300 new patterns to their library each month. The manufacturers expect to receive perfect models from which they can cast without the need for any additional finishing work. Bermark has earned the reputation over the years for delivering this level of quality.

Bermark uses Solidscape printers to grow their models for the accuracy they require. The printing technology handles the complex geometries in many of the designs and the Indura®Cast material produces consistent and repeatable results because there is no residue or shrinkage during burnout.

Manufacturers keep returning to Bermark each season to build their product lines because they can depend upon the quality. ❖

Solidscape® , Inc. is the leader in high-precision 3D printers. Solidscape systems are used for modeling prototypes and casting patterns for fine jewelry, dental restorations, turbine blades, medical instruments and prosthetics, consumer goods, electronics and many other high-precision products.
